

### Key Features

- Record the purchase date, vendor name, address, and contact person, price, to know when and where you obtained an instrument.
- Keep the serial number, model number available for reference when calling the manufacturer.
- Know where the equipment is located.
- Keep track of equipment that you have borrowed or loaned.
- Document the service requirements and schedule.
- Set reminders of warranty expirations and service deadlines.  
...and more

The **Equipment Inventory Module** takes care of that necessary task of documenting the 'vital statistics' on every piece of equipment you own. Know when you bought it, from whom, when the warranty runs out, what its depreciated value is, and so on.

This information isn't needed very often, but when you do need it, it's nice to have it at your fingertips for easy retrieval. Just look up the phone number when you have a repair issue and quickly make that call to get it taken care of. If you're thinking of replacing an old not-so-reliable item, look up the depreciated value to see whether there will be a budget impact to this decision.

1. Select Equipment under the Inventory Menu and open a new screen when you get a new piece of equipment.
2. Edit information on equipment already in use.
3. Set reminder flags for service deadlines.
4. Print an equipment list for easy reference of all equipment history.

### System Requirements

- Microsoft Windows 95+
- Microsoft Access 97+ or SQLServer 7.0+
- 20 MB of disk space
- 32 MB or memory
- VGA (800X600)
